Available from 1 November 2026, no notice period · Poland · Remote or hybrid; open to remote roles in the EU and worldwide · B2B or employment contract

PROFILE

AI engineer building internal AI tools at an industrial manufacturer since February 2025: a company-wide RAG assistant, a Microsoft Teams meeting pipeline, an AI translation portal and process-route analytics. Before that, four years of TypeScript and React in fintech and web3, and three and a half years of automotive CAD engineering in CATIA V5.

EXPERIENCE

AI Engineer · Wiśniowski

Feb 2025 – present

Internal AI tools for a Polish manufacturer of industrial doors, gates and fences. Official title: Specjalista ds. AI.

- **Company-wide RAG assistant:** Deployed RAGFlow on a Linux server with telemetry and monitoring, connected to Open WebUI through a custom pipeline as the chat front end; 90% answer accuracy.
- **Microsoft Teams meeting pipeline:** Scans one group's meetings in on-premises Outlook and turns on automatic recording; transcripts and recordings then arrive through Microsoft Graph (webhooks plus polling), are converted from VTT and analysed by an LLM into structured JSON reports.
- **AI translation portal:** Designed and shipped an internal portal built to replace lokalise.com: Gemini pre-translates each key, translators accept or correct, missed keys are detected, and every decision is logged so the AI acceptance rate is measurable.
- **Process-route analytics:** Prototyping analytics on process-route data: chat over historical production traces, tests of new settings and suggested routing paths.
- **AI interviews for process improvement:** Built on the Gemini managed-agents sandbox. A 15-minute voice or text interview about an employee's daily work produces an automation report, adds what it learned to an LLM-maintained knowledge wiki that grows with each interview, and turns repeatable workflows into SKILL.md files for agents.

SELECTED PROJECTS

Visual RAG for technical PDFs github.com/adagora/try_pixelRAG_optional_BM25_hybrid_JEV

Finds the right page in product catalogues and technical PDFs by how the page looks (drawings, tables, dimension callouts), then answers from the page images with a vision model and cites the page. **55% → 84%: top-1 page, visual-only vs hybrid; 100%: recall with LLM page reranking; p = 0.001: hybrid beats visual 11–0 where they disagree.**

CAD quoting engine for machined parts github.com/adagora/cad-tools › [skills/wycena](#)

Quotes a machined part from its STEP model for a tool shop. Code measures the geometry and computes the price; the language model reviews technology and risks the way a shop manager would. **STEP → PLN: geometry from OpenCASCADE, price from shop rates; 3 states: pass, fail or need-info on every check, each citing its source.**

LLM-judged translation audit github.com/adagora/jev-experiments

Finds inconsistent terminology in a translation corpus that never had a glossary. Code mines the disagreements across 7,040 keys and an LLM judge settles each one. **99,933: judgments in 3 minutes; ~300 ms: check on every edit in the review app.**

All projects: adagora.github.io/#projects

EARLIER EXPERIENCE

Software Engineer · Freelance

Aug 2023 – Jan 2025

- Prototyped AI tools (predictive models, chat over documents) to validate product ideas and shipped a staking app UI for web and mobile (TypeScript, React, ethers); 2nd place at the LearnWeb3 AI Hackathon.

Full-Stack Engineer · Playdate App Limited

Jun 2023 – Aug 2023

- Built release version control so users on outdated iOS and Android builds could be migrated, fixed a critical Android onboarding bug and owned CI/CD on AWS Elastic Beanstalk (React Native, Django).

- Software Engineer · Ariable

Dec 2022 – Jun 2023

 - Delivered the front-end MVP of an NFT perpetual trading platform and a real-time Node.js + PostgreSQL watcher for on-chain transactions; reviewed the Solidity contracts.
- Frontend Engineer · BlockchainWares Software

Dec 2020 – Dec 2022

 - Built balance, contacts and sanction-screening features for a regulated financial application (React, TypeScript, React Query), a Material-UI component library in Storybook and the Cypress E2E suite.
- Web Developer (part-time, in parallel) · Nervos Network

Dec 2021 – May 2022

 - Contributed to a DAO voting app and built a bridge UI for onboarding to the network.
- Automotive engineering · Varroc Lighting Systems, Auto Design, Alpha Technology

Jan 2017 – Jul 2020

 - Product Engineer, Varroc Lighting Systems.** Designed front and rear lamp components in CATIA V5: concept, fixing, feasibility, simulation and test results, tooling requests, BOM and GD&T drawings; worked with the Czech R&D team.
 - CAD Designer, Auto Design.** Designed interior parts (instrument panel, door trim) for Audi and ported parts from CATIA V5 to NX 11.
 - Project Engineer, Alpha Technology.** Prepared technical inquiries for the VW Group, worked in the D-FMEA team and trained staff on plastics processes.

SKILLS

LLM applications	RAG (hybrid BM25 + vector, reranking, citations), Visual RAG over PDFs, Agents and tool calling, LLM-as-judge, Structured extraction, Evaluation and benchmarks, Prompt engineering
Models and platforms	Claude, Gemini, OpenAI, Vercel AI SDK, RAGFlow, Open WebUI, FAISS, Microsoft Graph
Languages	TypeScript, Python, Go, JavaScript, SQL
Backend and infrastructure	Node.js, Bun, Express, NestJS, FastAPI, PostgreSQL, Prisma, Redis, Linux servers, GitHub Actions, AWS Elastic Beanstalk, Telemetry and monitoring
Frontend	React, Next.js, React Native, React Query, Material-UI, Storybook, Cypress, D3
Engineering and CAD	CATIA V5 (advanced), Siemens NX, AutoCAD, GD&T, BOM, D-FMEA, Plastics, OpenCASCADE / build123d, STEP and DXF
AI-assisted development	Claude Code, Codex, Agent skills, AGENTS.md

EDUCATION

- MSc Eng., Materials Engineering (surface engineering and heat treatment)

Silesian University of Technology, Gliwice, 2010–2016
- Exchange, Forming technology (Umformtechnik)

TU Bergakademie Freiberg, Germany, 2014–2015
- Exchange, Materials science

Universidad de Oviedo, Spain, 2013

LANGUAGES

Polish Native · English Professional working (B2) · German Limited working (B1, DSH-2 certificate)

CERTIFICATES

- CATIA V5, advanced level, CADSOL Design Poland (2018)
- AutoCAD, levels 1 and 2, Autodesk (2015)
- Generative AI Essentials for Software Developers

AWARDS AND PUBLICATIONS

- 2nd place, LearnWeb3 AI Hackathon (2023)
- Co-author: *Laser surface treatment technologies: laser ablation*
